

We say *farewell* to the 180 and continue the legacy it left behind.

It is with a great deal of pride, as well as sadness, that we announce the retirement of our much loved SonoSite® 180™ ultrasound system* — the system that forever changed the face of ultrasound medicine.

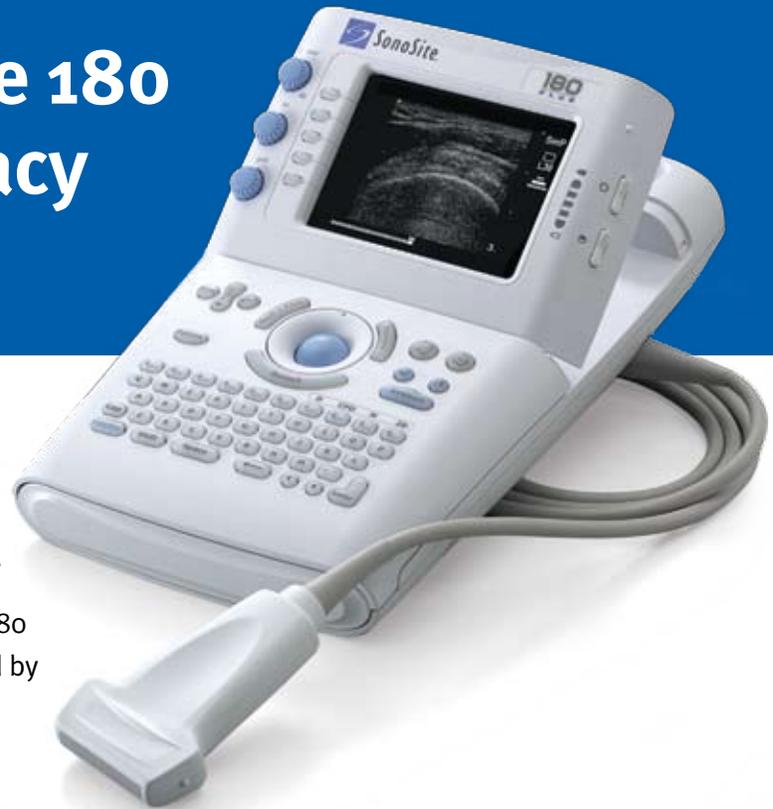

As the first point-of-care ultrasound system, the SonoSite 180 system was instrumental in changing the face of ultrasound by giving clinicians, for the first time in medical history, the opportunity to use ultrasound technology in any location at any time. The first of SonoSite's broad range of highly sophisticated systems, the SonoSite 180 was the most successful point-of-care ultrasound system ever sold, with nearly 25,000 installations worldwide – most of which are still in clinical use today.

After 11 years of outstanding performance, the SonoSite 180 and SonoHeart® systems were retired as of October 2009, with continued service and support through October 2016.

SonoSite's product family has expanded significantly over the years to include a wide range of powerful ultrasound solutions that improve the cost, safety, and quality of health care across the clinical spectrum. From our latest system, the 6-lb. NanoMaxx™ imaging tool, to our line of mountable S Series™ products and our flagship M-Turbo® ultrasound system — our most clinically versatile system — SonoSite has a solution to fit every ultrasound need in any clinical environment.

We sincerely thank you for your continued support and look forward to serving you in the years to come.

Please contact your sales representative for more information on our generous up-trade program or visit www.sonosite.com/180 for more product information.
